"How To Build Your Birdhouse"

Foreword

If you are someone who loves wild birds how would you like to attract different species to your own back yard? Just like the movie classic, if you build the right house they will come.

It's true. If you create the right environment for a particular bird it's as if you sent out engraved invitations to the right birds. And as any guest, they will welcome your hospitality.

Our environment continues to become degraded with natural habitats for wildlife declining at an alarming rate. Beginning a hobby that leads to helping our feathered friends to flourish is not only personally rewarding but is also environmentally sound.

First you must know what birds you would like to attract. That entails a bit of research. Fortunately, everything you need to know to develop this hobby is available in ***"How to Build Your Birdhouse."***

"How to Build Your Birdhouse"

By Peter Wodehouse

Birdhouses are the best alternatives to natural features providing nesting spaces for birds. There are many hundreds of bird species, but only a small percentage of these birds can now nest in natural cavities. So, many will welcome the opportunity of nesting in your birdhouses - especially birds like wrens, bluebirds, chickadees, titmice and even wood ducks.

Did you know that every species of bird has special preferences about the type of nest or birdhouse that it will use? Tree swallows, wrens, and bluebirds prefer single unit, enclosed birdhouses.

Bluebirds and tree swallows prefer open areas with fewer shrubs and trees while wrens prefer nesting in boxes close to shrubs. Phoebes and robins like a sheltered platform, rather than closed nest boxes.

Building birdhouses is very easy when you know how and **"How to Build Your Birdhouse"** makes it child's play. Just take a quick look at what is included for you:

- History of Birdhouses
- Types of Birdhouses
- Birdhouses for Different Species
- Materials Used for Building a Birdhouse

- How to Hang a Birdhouse

Building birdhouses has been a popular activity since the days of tribal settlements in Europe and North America. Native American tribes used to hang hollow gourds for purple martins to come and nest in. These tribes reared purple martins to keep away turkey vultures, which would otherwise plunder the tribes' meat racks.

Since then, making birdhouses to provide birds with shelter has been a hobby with many bird-watchers for years.
