Chapter 1: Introduction

The "M&A" in the title of this e-book refers to "Mergers & Acquisitions". Mergers and Acquisitions occur in the business world on a regular basis. The M&A Profits strategy provides an effective way to profit from these deals and beat the market. It is easy to learn and can be used by beginners and experienced stock traders. You will not need any charting software or subscription services to use the M&A Profits strategy. All of the information that you need to use this stock trading strategy is included in this e-book.

The M&A Profits strategy can be used in both good markets and bad markets. It has a certain amount of safety built into it that enables it to still be successful in bad markets, however, it is not risk free. Stock trading involves risk. Only risk capital should be used for trading stocks. It is a good idea to begin by trading on paper when you are learning a new stock trading strategy. Everyone's financial situation, risk tolerance, and schedule are different. By trading on paper, you can decide which of the M&A Profits strategies will best suit your needs.

Chapter 2: Mergers and Acquisitions

Mergers and acquisitions come in a variety of shapes and sizes. A merger occurs when two companies, usually of equal size, join together to form a new company. This is commonly referred to as a merger of equals. An acquisition occurs when one company buys another company and the company that was purchased no longer exists. Technically, mergers and acquisitions are two different types of transactions. However, since they are very similar, they are grouped together and commonly referred to as M&A's. Wall Street investment bankers usually have an M&A department to handle these types of business deals.

Let's take a closer look at mergers. When two companies agree to merge into a new company, there will be a financial transaction to close the deal. The two companies must come to an agreement on how this transaction will be handled. There will be an exchange of either stock or cash, or both, to close the deal.

In some cases, the stock of both companies will be surrendered and new stock will be issued to the shareholders of both companies. For example, Company A and Company B are merging to form Company AB. The stocks of Company A and Company B will be surrendered. The new

company will issue new shares of stock called Company AB that will be distributed to all of the shareholders of Company A and Company B.

These new shares of stock will replace the old shares of stock that the shareholders surrendered.

Chapter 2 continues to present further aspects of the Mergers And Acquisitions Strategy in the full document. We wish you the best of luck with your trading and hope that you will be able to beat the market for many years to come with the M&A Profits strategy!

To your trading success!

Peter G. Johnson
